SUMMARY

Backend Software Engineer building and shipping production systems across the Python ecosystem and AI/LLM integration.
Work recognized at the Global Fintech Festival 2025.

EXPERIENCE

Homeville Group - Software Engineer

June 2025 - Present

AI microservices and Python ecosystem projects under the VP of Technology

Mumbai, India

- Rebuilt a loan processing pipeline that crashed past 300 concurrent loans into one stably handling 6,000+ with AsyncIO.
- Cut batch runtime 95% from over 30 minutes to under 2 minutes across around 800K rows per run.
- Eliminated a MySQL query bottleneck, cutting query latency from 80 seconds to 7 seconds at high concurrency.
- Spearheaded the end-to-end build of a FastAPI speech-to-text and translation service with Gemini API summaries.
- Benchmarked open-source and cloud transcription models and selected Fast Whisper for production.
- Evaluated multi-cloud storage and compute economics across AWS S3 and GCP GCS for cross-cloud egress and migration.
- Built and shipped 2 Tier-1 bank integrations end to end with idempotent data contracts for critical transactions.
- Developed CRON-driven async workers for event-driven automation, anomaly detection, and reporting.
- Automated conversion of production data into masked dummy datasets, replacing manual test data creation.
- Built post-deployment validation scripts comparing old and new outputs, saving a day of manual cross-checks per release.
- Migrated the multi-tenant reconciliation engine to Python, aligning it with the core backend stack.
- Modernized the OCR pipeline with upgraded text extraction, image transformation, and PII masking for image and PDF.

HN Web Marketing - Software Engineer Intern

Aug 2021 - Oct 2021

Client projects on Linux production infrastructure

Pune, India

- Built and maintained deployment pipelines for 16+ production client environments on Linux infrastructure.
- Delivered new client projects from scratch and updated existing ones to meet evolving client requirements.
- Handled production troubleshooting, server configuration, system updates, and security across client environments.

Bitlance Tech Hub Pvt Ltd - Python and Django Developer Intern

May 2020 - Jul 2020

Training internship, basic Python to advanced Django across multiple modules

Amravati, India

- Built RESTful APIs with Django REST Framework and token-based authentication.
- Modeled data with Django ORM and managed it through customized Django Admin.
- Built NumPy and Pandas pipelines to clean raw datasets and render Chart.js visualizations.

PROJECTS

TypeRush - Rust, TUI, GitHub Actions, Claude Code

[crates.io](#) · [GitHub](#)

- Built a cross-platform terminal typing trainer in Rust with live WPM and accuracy tracking across 5 modes.
- Added a themeable TUI with a configurable settings system and persistent session history across runs.
- Developed end to end with AI-assisted coding in Claude Code, shipping CI-built binaries for Linux, macOS, and Windows.

1Link: Modular Link Aggregator - Python, Django, DRF, PostgreSQL, Celery

[GitHub](#)

- Architected a modular Django monorepo with 7 decoupled apps for independent scaling.
- Exposed a RESTful API layer with DRF serializers, user registration, and dynamic profile URL routing.
- Integrated PostgreSQL for relational storage, Redis powering the leaderboard, and Celery for async background jobs.

SKILLS

Backend: Python, FastAPI, Pydantic, Django, AsyncIO, Celery, RESTful APIs, Microservices, Frappe

Database: MySQL, PostgreSQL, MongoDB, Redis, Query Optimization, SQL/NoSQL

DevOps & Cloud: AWS S3/EC2, GCP GCS/VM, Docker, CI/CD, Linux, Git, CRON

AI / GenAI: LLM Integration, Gemini API, Claude Code

Frontend Exposure: JavaScript, TypeScript, HTML/CSS, React, Next.js, Tailwind CSS, Chart.js

EDUCATION

Thadomal Shahani Engineering College

2021 - 2025

Bachelor of Engineering in Computer Engineering

Mumbai, India
